

PRODUCT BRIEF

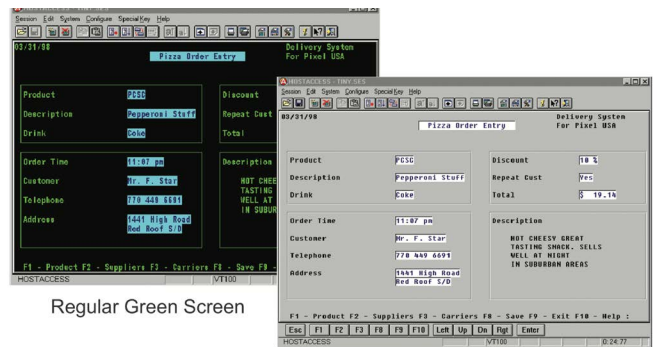

Deliver PC-Based Terminal Emulation Connectivity to Legacy Apps

HostAccess offers a suite of terminal-emulation products that provide Microsoft Windows users secure access to legacy, host-based applications, as well as the ability to transform the interface of existing applications using a browser.

HostAccess technology enables:

- Increased host user productivity by providing the ability to perform multiple tasks.
- Standardization on one terminal emulation solution.
- Point-and-click report production and host data integration with Windows applications.
- Connection to multiple systems within one integrated environment.
- Reduction in software administration time and costs.

Whether you're looking for asynchronous/synchronous connections, server-based administration, concurrent users or multiple session access, the HostAccess solution offers all of this functionality in a single package.

Regular Green Screen

Auto GUI Screen

Implement Your IT Strategy in Three Easy Steps

1. Create a tailored GUI to transform most traditional green screens into modern, Windows-like applications in minutes using the powerful AutoGUI features.
2. Integrate your host applications with your PC applications using OLE and DDE automation.
3. Transform your host applications with floating toolbars, hotspots, hot keys, mouse support, icons, push buttons, secondary windows, graphs, ActiveX Controls, and COM Objects using the AiF Toolkit.

Supported Networks & Emulations

Network	Emulations
