Helix QAC Onboarding Packages

When you purchase Helix QAC, we bundle in an onboarding package to ensure a successful experience and deployment right from the start by having our experts install and configure Helix QAC for you.

We provide Quick Start, Advanced, and Custom Enterprise Onboarding options to meet the needs of organizations and teams of all sizes — simply select the one that's right for you.

Helix QAC Quick Start Onboarding

We ensure your tools and licenses are installed, your dashboard is installed and configured, you are up and running on one project with clean analysis, and you have a basic understanding of your desktop environment

Helix QAC Advanced Onboarding

DevOps customers have more rigorous onboarding needs and expectations. Our Advanced Onboarding includes all the setup and configuration components from our Quick Start Onboarding in addition to guidance on how to correctly install and understand advanced features in a variety of DevOps environments.

Custom Enterprise Onboarding

Schedule a preparatory meeting with one of our consultants to establish the scope and effort of your onboarding. Our model and approach provide flexibility and proven expertise for large, complex, or highly specialized cases.

Get Started Today

Deploy Helix QAC with confidence! Our accomplished Services team is here for you to ensure a successful onboarding experience — getting you up and running quickly and optimally, according to best practices.

Contact us today to get started or to schedule a scoping call where we'll be happy to discuss your custom requirements.

We also offer a range of product training that pairs perfectly with your onboarding experience, as well as consulting services and solutions to help you integrate, audit your code or coding standards, and simplify compliance certification. Contact us for more information!

Advanced Onboarding

(includes all the components of Quick Start Onboarding plus the following)

Advanced Desktop Focus: Setting up a Multi-Project Environment to Eliminate Third-Party Files While Retaining Complete Analysis

VCS setup for baseline and dashboard upload – both setup and testing. 

One customized VCS integration. 

When available, provide HIS Metrics Report (available during the onboarding session). 

Set up one project in a continuous integration environment. 

Set up baseline system with either VCS or project-based configuration. 

Integrations Focus: Plus Discussion of Results in the Dashboard (Multi-Project Upload and Suppressions)

VCS setup on dashboard to suppress upload of source code to dashboard (1 project). 

Tutorial on how to use continuous integration with dashboard upload and other details related to automation after the upload as needed. 

Metrics (HIS metrics setup, SQALE metrics setup). 

Custom reports (1 or 2 example reports; detailed guidance on setting up a report). 

Enterprise Focus: Set up the Structure to Analyze all Needed Code and Report in the Correct Places (and in Correct Numbers)

Desktop — set up custom user rules and messages, with one example of:

- Metric Threshold
- Function Detection
- Name Check for Function Names and Variable Names

Dashboard — additional dashboard set up:

- Assist with setting up LDAP integration.
- Assist with setting up email integration.
- Email reports, if desired.
- Set up scheduled report generation.
